

Bushnell Falcon 10x50 Wide Angle Binoculars

Bushnell is the leading brand in high-performance binoculars, and the Falcon series offers powerful magnification at an economical price. Versatile, and ideal for stadium sports, bird-watching, hunting, and many other outdoor applications, the 10x50 model boasts a durable design and rubberized, abrasion-resistant finish. An InstaFocus lever provides smooth feedback, with just enough tension to fine-tune magnification, while a Porro prism and coated lenses provide sharp viewing. For those who wear eyeglasses, or sunglasses on bright days, clever fold-down eyecups protect your lenses from scratching.

Making Eye Adjustments (Figure 1):

The distance between the eyes, called "interpupillary distance," varies from person to person. To achieve perfect alignment of lens to eye, follow these simple steps.

- ☑ Hold your binocular in the normal viewing position
- ☑ Grasp each barrel firmly. Move the barrels closer together or further apart until you see a singular circular field. Always re-set your binocular position before using. Improper alignment of the interpupillary distance can cause double-images.

How to Adjust for Individual Eye Strength:

Bushnell Falcon binoculars utilize the "Insta-Focus" focus system. "Insta-Focus" binoculars have a central focusing lever between the barrels. Focus at any far or near distances can now be attained simply by pressing the "Insta-Focus" lever.

Eye Cups (Figure 3):

Bushnell Falcon binoculars are fitted with rubber fold-down eyecups designed for your comfort and to exclude extraneous light. If you wear sun/eyeglasses, roll down the eyecups. This will bring your eyes closer to the binocular lens thus providing improved field of view.

Specifications:

- Magnification/Lens Diameter: 10x / 55mm
- Auto focusing Porro prism
- 25-foot close focusing distance
- Weight: 27 oz.
- Eye Relief: 9mm
- Exit Pupil: 5mm
- Field of View @ 1,000 yds: 300ft
